Allowable Subject Matter

1. Claims 1, 10, 12, 16-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:

A. Claims 1, 16 and 17 are directed to a method of controlling printing. Claim 1 identifies the uniquely distinct features of "a generating step of generating print data such that a piece to be arranged at an upper left corner of a plurality of pieces comprising the first page of print data is printed on the front side of a medium and a piece to be arranged at an upper right corner of a plurality of pieces comprising the second page of print data is printed on the back side of the medium, when both of the poster printing and the double-sided printing are included in the printing attributes". The closest prior art Nishikawa (US 6,507,411) teaches in column 9, lines 6-18 that if the printing paper is to undergo double-sided printing, the guide 38 forms a path that leads the printing paper to the underlying double-sided printing unit. Printing paper that has been introduced to the double-sided printing unit first is fed into an area below the cassette 1 (see the transport path indicated by the two-dot broken line) by a transport roller 40, after which the printing paper is transported in the reverse direction and sent to a duplex tray 39. The printing paper received in the duplex tray 39 will be upside down relative to the printing paper stacked in the paper cassette 1 and its orientation in terms of the transport direction will have been reversed. By performing transfer and fixing of a toner image again under these conditions, double-sided printing can be performed. Also, teaches in FIG. 10, poster printing is achieved by using the system of

FIGS. 1 to 4 to draw, in enlarged form, the content of one page drawn by an application, and prints the enlarged image upon dividing it among a plurality of physical pages, i.e., a plurality of sheets (of paper, for example). By connecting the sheets of paper bearing the divided enlarged image, it is possible to obtain an output result that is larger than the size of the paper supported by the printing system, either singularly or in combination with other cited references fails to anticipate or render the above underlined limitations obvious (when used with all the claimed limitations).

B. Claims 10, 18 and 19 are directed to a computer-executable program stored in a computer-readable medium for causing the computer to execute procedures. Claim 10 identifies the uniquely distinct features of "a generating procedure of generating print data such that a piece to be arranged at an upper left corner of a plurality of pieces comprising the first page of print data is printed on the front side of a medium and a piece to be arranged at an upper right corner of a plurality of pieces comprising the second page of print data is printed on the back side of the medium, when both of the poster printing and the double-sided printing are included in the printing attributes". The closest prior art Nishikawa (US 6,507,411) teaches in column 9, lines 6-18 that if the printing paper is to undergo double-sided printing, the guide 38 forms a path that leads the printing paper to the underlying double-sided printing unit. The printing paper received in the duplex tray 39 will be upside

down relative to the printing paper stacked in the paper cassette 1 and its orientation in terms of the transport direction will have been reversed. By performing transfer and fixing of a toner image again under these conditions, double-sided printing can be performed. Also, teaches in FIG. 10, poster printing is achieved by using the system of FIGS. 1 to 4 to draw, in enlarged form, the content of one page drawn by an application, and prints the enlarged image upon dividing it among a plurality of physical pages, i.e., a plurality of sheets (of paper, for example). By connecting the sheets of paper bearing the divided enlarged image, it is possible to obtain an output result that is larger than the size of the paper supported by the printing system, either singularly or in combination with other cited references fails to anticipate or render the above underlined limitations obvious (when used with all the claimed limitations).

C. Claims 12, 20 and 21 are directed to a printing control apparatus. Claim 12 identifies the uniquely distinct features of "a generating unit of generating print data such that a piece to be arranged at an upper left corner of a plurality of pieces comprising the first page of print data is printed on the front side of a medium and a piece to be arranged at an upper right corner of a plurality of pieces comprising the second page of print data is printed on the back side of the medium, when both of the poster printing and the double-sided printing are included in the printing attributes". Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
